

Borgderson-Exercise 4-Union & UNION ALL-Ivy-Claude-13 July 2026

Bonus questions

Bonus 01

They should use Union, because it ensures each customer appears only once in the combined list giving the ~~analyst~~ fraud analyst a clear accurate view of unique high risk individuals appeared in either January or February

Bonus 02

They should use UNION ALL because they want to count every individual transaction that passed through the bank in Q1 irrespective of whether the individual does transaction multiple times. So in these case UNION ALL will keep every row, including duplicates.

Ques 03

UNION requires to have equal column count and compatible types, If the rule is broken the the syntax will fail

we are given

```
SELECT account_id, account_holder  
FROM branch_sandton_accounts
```

```
UNION  
SELECT account_id, account_holder, city  
FROM branch_rosebank_accounts;
```

The query fails because on the first select it selects 2 columns and on the second select it then have 3 columns the third one being city

The correct query

```
SELECT account_id,  
       account_holder  
       'Sandton' AS city
```

```
FROM branch_sandton_accounts
```

```
UNION
```

```
SELECT account_id,  
       account_holder, 'Rosebank' AS city
```

```
FROM branch_rosebank_accounts
```
